

GOLF COURSE RENOVATION is sometimes a necessary reinvestment in your course's future and survivability. Golf course renovation does not necessarily have to be a multi-million dollar reinvestment.

The purpose of renovation is to increase revenue versus renovation cost.

Addressing issues such as strategy, scenic impact, functional beauty and playability result in highly successful projects that keep your facility competitive and unique.

Drainage issues, water quality issues, depth perception, privacy, screening, physical beauty, topography, attracting wildlife and a course's personal character are all part of the total renovation equation. We use native plant material and our design and golf knowledge to solve a wide variety of these and other related client concerns.

Creating and having a **MASTER PLAN** of improvements allows you to implement either the entire plan or parts of the plan over time. Based on your priorities and your budget, the use of native plant material may be the obvious and most simple solution to many issues. Whether it's one plant at a time or one hole at a time, the investment is minimal and the effect is dramatic.
